Containerized PET bottling plant

The containerized PET bottling plant incorporates a stretch blow molding machine to produce plastic bottles from PET preforms, followed by a filling and closing machine, a check weigher, a wrap around labeling machine, a laser coding system and a bottle buffer table.

The bottling unit is extremely clean due to its containerized concept.

All bottling operations are automatic and built inside 2 containers 40ft, which are seamlessly connected during operation.

The PET BOTTLING CONTAINER is a flexible system, allowing different liquids and different bottle sizes.

The unit is compact and has high accessibility to all its important sections, facilitating maintenance.

The unit has remote control and monitoring capability.
